Infrared Thermography for CMU grouting

P.O. Box 11890 * College Station, Texas 77842-1890 * Email: craig@inspectmasters.com

Phone: 979.696.9744 * Fax: 979.694.6687 * Toll free: 1.866.696.9744

Vertical grout columns @ 40" O.C., top bond beam & double column at wall joint.

View of incomplete grouting around door jamb.

Infrared Thermography is a fast, efficient, very effective and nondestructive method of verifying grouting of CMU walls in accordance with the plans and specifications. This incredible technology does not interfere with your other trades on-site, and can even be done at night if your application requires it. We will provide you with instant results on-site if needed and deliver you a full report via US mail. The final report will contain an image of each affected area along with an explanation and identification. **Whether your needs are for troubleshooting, verification of compliance with specifications, litigation, or any other use, our report can be tailored to fit your needs.**

- State-of-the-art equipment is excellent for detecting voids in grouted door jambs, vertical columns, bond beams, etc.
- Clear concise reporting is easy for all staff to interpret.
- Problem areas are identified based on your column line ID's.
- We are centrally located in the United States and are available for travel to virtually any location worldwide.
